## Selected Research Projects

### Text Style Transfer

Sept'21 - Nov'22

Advisors: [Dr. Aravindan Raghuveer](#), [Dr. Preksha Nema](#)

- Developed an AMR graph based framework to improve content preservation in generation. [EMNLP'22]
- Proposed method significantly out-performs state-of-the-art techniques by achieving on an average **15.2% higher content preservation** with negligible loss (~3%) in style accuracy.
- Performed human evaluations to illustrate that T-STAR has **50% lesser hallucinations** compared to SoTA TST models.

### Multi-modal summarization

Jan'19 - Jul'21

Advisors: [Dr. Sriparna Saha](#), [Prof. Adam Jatowt](#), [Dr. Mohammed Hasanuzzaman](#)

- Developed and implemented various systems using optimization techniques like integer linear programming, differential evolution, grey wolf optimizer etc. to solve text, image, and video summary generation. [ECIR'20, SIGIR'20, SIGIR'21]
- Formally defined the complementary/supplementary enhanced multi-modal summaries, and achieved a new state-of-the-art on unsupervised MMS, surpassing the predecessor by almost **twice as better ROUGE-2 scores**. [SIGIR'21]
- Wrote the first ever literature survey on multi-modal summarization. [ACM Computing Surveys'23]
- First work towards topic-aware multi-modal news summarization. [Findings ACL'22]
- Curated large-scale multi-modal multi-lingual summarization corpus spanning over 20 languages. [EACL'23]

### Automatic Text Summarization

Jul'19 - Dec'21

Advisors: [Dr. Sriparna Saha](#), [Prof. Pushpak Bhattacharyya](#)

- Extractive Summarization.** Utilized nature-inspired algorithms like Differential Evolution, Grey Wolf Optimizer, Water Cycle Algorithm etc. in a multi-objective optimization framework to generate extractive summaries. [KBS'18]
- Abstractive Summarization.** Proposed an RL-based 'extractor-abstractor' framework to outperform its predecessors by a margin of **0.5 ROUGE-1, 0.4 ROUGE-2, 1 METEOR, and 0.9 WMS scores**. A knowledge discovery that seq2seq networks like PGN model implicitly extract and paraphrases sentences was brought to light through this work. [ICON'20]
- Evaluation Metrics.** Proposed WIDAR, a ROUGE-based evaluation metric that evaluates generated summary by taking into account both the reference summary and input document. WIDAR correlates better than ROUGE by **26%, 76%, 82%, and 15% in coherence, consistency, fluency, and relevance** on human judgement scores provided in the SummEval dataset. It was able to obtain comparable results with the SOTA while requiring  $\sim \frac{1}{64}^{th}$  of computational time. [ECIR'22]
